

Empowering laboratories to increase market share & ROI, solve reimbursement challenges, and assist physicians in improving patient care.

Clinical & Anatomic Pathology

Molecular & Genetics

Toxicology & Pain Management

Imaging

The CareEvolve outreach portal and interfaces power clinical, anatomic pathology, genomics, toxicology, and other types of laboratories, providing electronic clinical workflow support between the point of care and laboratory. We provide laboratory customers with a broad range of features supporting the needs of physician offices, hospitals, long-term-care facilities, and patient-service-center workflows.

The comprehensive CareEvolve ordering solution bridges with the EHR, eliminating manual data entry and ensuring orders are clean and complete when they reach the laboratory. Results are available directly within the EHR, as well as in CareEvolve's intuitive physician portal and patient portal. The patient results portal provides laboratories with a fast, convenient way to electronically send lab results to patients, reducing phone calls and paperwork and allowing staff to focus on patient care.

With a robust interface platform that enables the secure transfer of orders and results, CareEvolve provides the connectivity and ordering solution laboratories need to increase sales, differentiate, and retain long-term accounts.

# Electronic orders and results, clinical data connectivity, management tools & chronic disease state monitoring

## Clean, Complete Electronic Orders with Clinical Data

- Orders via EHR, provider portal, or lab website
- Medical necessity checks at order entry
- Place orders on hold while verifying insurance
- Print Auto12-A barcodes at drawsite
- Auto-register patients in LIS, LIMS, HIS, or REG system
- Duplicate order transfer to radiology scheduling system

## Clinical Data from the EHR

- Receive orders with demographics and insurance information from PMS/EHR
- Receive clinical information with order (medications, clinical history, family history, patient consent, etc.)

## Immediate Results Delivery

- Provide results to clinicians immediately upon release
- Forward results to a medical review officer
- Distribute results directly to patients
- HL7, PDF, DICOM, and other formats
- Access PACS server through provider portal

## CareEvolve Outreach Portal Makes it Easy for Physicians to Place Orders and Receive Results

### Easy, Intuitive Ordering Accelerates Physician Adoption

Frequently ordered tests and panels can be combined into a single group, streamlining ordering. Tests are automatically displayed on the screen based on the physician's ordering history.

### Electronic Reports Give Providers the Choice of Where, When, and How

In addition to viewing and printing results, the CareEvolve portal allows users to trend reports, run cumulative reports for individual patients, forward reports to patients, run population health reports and generate global results reports.
